PROFESSIONAL SUMMARY

Final-year Computer Science Engineering (AI) student with hands-on experience building and coordinating software projects, with a strong interest in Product Management. Skilled in requirements definition, SDLC, product documentation, stakeholder coordination, market research, and user-focused problem solving. Built a full-stack risk-scoring platform with REST APIs and an ML-based research product, seeking to contribute to product execution, QA, launches, and feedback-driven feature improvements.

SKILLS

- **Product Management:** Product Thinking, Problem Breakdown, Requirements Definition, Product Scoping, PRDs, User Stories, Feature Definition, Workflow Specifications, Acceptance Criteria, Market Research & Analysis
- **Product Execution:** SDLC Understanding, UAT & Quality Assurance, Backlog Management, Agile/Scrum, Sprint Planning, Prioritization, Product Documentation, Rollout Planning, Feature Iteration
- **Data & Analysis:** KPI Tracking, Data-Driven Decision Making, Data Validation, User Segmentation, Funnel Analysis, Operational Metrics, Structured Reporting
- **Technical:** Python (Basic), C (Basic), REST APIs, SQL (Basic), Databases, Git/GitHub, Workflow Understanding
- **Project & Stakeholder Management:** Cross-Functional Collaboration, Stakeholder Management, Dependency Tracking, Task Management, Risk Identification, Delivery Coordination
- **Tools:** Jira, Microsoft Excel, Power BI, MS Office, Google Workspace

THINGS I'VE BUILT

OpenTrace — AI-Powered Cyber Risk Analyzer — React.js, Node.js, Express.js, MongoDB, REST APIs *2026*

- Sat with the problem first: defined requirements and designed the end-to-end workflow from data collection to reporting, before any build started.
- Integrated REST APIs (GitHub, Reddit profile analysis) with AI-assisted risk scoring, coordinating with teammates to keep the build on track.
- Owned testing and QA, catching gaps before handover, and documented the process for review.

KeyMood-AI — Federated Emotion Detection System — Python, Streamlit, SQL, Machine Learning *2026*

- Ran the project end to end: planning, structured experiments, data analysis, and progress tracking across a four-person team.
- Built a dashboard translating research results into a clear, non-technical summary, so findings were usable, not just accurate.

SIMULATIONS

Product Management Job Simulation — Electronic Arts (via Forage) — Remote *2026*

- Analyzed engagement, retention, and churn data; used segmentation and KPI analysis to shape product recommendations.
- Built structured reports translating data into decisions a product team could act on.

Operations Job Simulation — Goldman Sachs (via Forage) — Remote *2026*

- Traced a stuck client transaction to root cause across a compliance hold and liquidity gap; coordinated resolution across Trading, Compliance, and Client Service.
- Wrote a formal Trade Fail report: root-cause analysis, resolution steps, and risk-mitigation actions under a time-sensitive scenario.

EDUCATION

B.Tech, Computer Science Engineering (Artificial Intelligence) — Parul Institute of Engineering and Technology, Vadodara | CGPA: 7.09/10 *2023 – 2027*

CERTIFICATIONS

- Basics of Business Analytics — UniAthena & Cambridge International Qualifications, 2026
- IBM AI Foundations for Business — Coursera & IBM, 2026
